

## **ZIP Code Health Insurance Coverage Documentation**

## Introduction:

Our ZIP Code Health Insurance Coverage product provides information on how many people per ZIP Code have various forms of healthcare insurance. The data is broken up by age groups.

This data is organized by the Census ZCTA, which is a close approximation of a ZIP Code. In this product, for the sake of simplicity, we will refer to them as ZIP Codes. This product only includes ZIP Codes that had populations in 2010, when the last Census was taken. It does not contain PO Box ZIP Codes which had no population counts. The data is updated annually with the latest statistics.

Note: all population figures are estimates based on the best, most recent data available, but the data can fluctuate from year to year.

## **Included Information:**

There are two file formats: a .csv comma-separated format and a .xlsx Excel file format which is optimized so that you can scroll left/right or up/down and still see the headings and identifying information.

For each record, there is a ZIP Code, State, Primary City, Primary County and a current estimate of the total population *estimate* for that ZIP Code.

The following are the age groups of data provided:

- Under 19 years old
- 19-34 years old
- 35-64 years old
- 65 and older

Within these groups are the following estimates per ZIP Code:

- Total estimated population within that age group.
- For individuals with one health insurance policy, we have estimates of:
  - Those with Health Insurance from their current or former employer or union.
  - Those who purchased their health insurance directly from an insurance company.
  - o Those with Medicare (65 and older, or people with certain disabilities).
  - Those with Medicaid, Medical Assistance or any kind of governmentassistance plan for those with low incomes or a disability.
  - o Those with TRICARE or other Military health coverage.

- Those enrolled for VA health care.
- For those with two or more health insurance plans, we have estimates of:
  - o Those who have both employer-based and direct-purchase coverage.
  - Those who have both employer-based and Medicare coverage.
  - o Those who have both direct-purchase and Medicare.
  - o Those who have both Medicare & Medicaid (means-tested public coverage).
  - o Those who have other private only coverage.
  - o Those who have other public only coverage.
  - Those who have other coverage than the previous categories.
- We also have an estimate of those with no coverage.

Need other data? If so, let us know. We try to hand-pick the most valuable data from literally thousands of data elements available.

**Important Note:** the total population in this product may not match the total population in our Census Pro demographics product. This is because the universe that this data is derived from the civilian, non-institutionalized population and excludes active-duty military personnel and the population living in institutional group quarters (GQ) (such as correctional facilities and nursing homes) but includes the population living in noninstitutional group quarters (such as college dormitories).
